Ckov workshop plan

David Lange

Nov 10, 2005

Status

- Pedestals calculated in most recent pass1 pass.
  - Some tweaking was done afterwards to deal with low stats runs.
  - A bit more is needed to deal with ~no statistics runs. Have script from Andre to handle this

- TDC histos w/ cut on adc for all data in pass1 job

- Module to extrapolate tracks to mirror planes started by David/Nick/Jon.
  - Path length + mirror of intersection
  - Could be run in pass3 (but needs pass3 output to tune up)

Goals

- Finish pedestal fixups
- Evaluate TDC functionality
- Churn extrapolation module through sizable amount of data to better evaluate performance
- Extend this module
  - Find all mirrors where light is expected
- Discuss plan for gain calib and dst info.

- Discussion of (PID) tagged calibration samples?
